Relation of left ventricular chamber and midwall function to age in normal children, adolescents and adults

(Ital Heart J 2000; 1 (9): 640)

Relation of left ventricular chamber and midwall function to age in normal children, adolescents and adults (de Simone et al., Ital Heart J 2000; 1 (4): 295-300). On page 296, the second, third and fourth formulas of the right-hand column should have read as follows:

$$\text{mFS} = \frac{(D_d + H_d) - (D_s + H_s)}{(D_d + H_d)} * 100$$

$$(D_d + H_d)^3 - D_d^3 = (D_s + H_s)^3 - D_s^3$$

$$H_s = [(D_d + H_d)^3 - D_d^3 + D_s^3]^{1/3} - D_s$$
